Education

2020 – 2026 (expected)	Graduate School of Economics, Finance and Management Ph.D. in Economics	Frankfurt, Germany
2015 – 2016	Barcelona School of Economics Master's Degree in Applied Economic Analysis	Barcelona, Spain
2012 – 2015	Eötvös Loránd University, Eltecon Bachelor's Degree in Economics	Budapest, Hungary

Working Papers

Cash Flow-Based Lending, Bankruptcy Resolution, and the Macroeconomy

Job Market Paper

Abstract: Creditors limit lending against future cash flows if they expect the borrower to be liquidated under financial distress. This puts small and medium-sized firms at a disadvantage since high reorganization costs often force the liquidation of these businesses. I study the general equilibrium effects of this mechanism in a heterogeneous firms model, calibrated to the U.S. economy. The limited access to cash flow-based debt experienced by small, but productive firms suppresses entry and yields credit misallocation and significant productivity losses. These results suggest that recent policy efforts to streamline the reorganization process for small firms, such as the Small Business Reorganization Act of 2019, can incentivize entry and raise aggregate productivity, by improving small firms' access to external finance.

A Model-Based Comparison of Macroprudential Tools

MNB Working Papers, No. 2021/3, with Eyno Rots

Abstract: We develop a DSGE model to analyze a macroprudential policy framework. We use it to describe the Hungarian economy and the key regulatory constraints implemented there: the loan-to-value and the debt-service-to-income caps imposed on mortgage borrowers and the minimum capital requirement imposed on banks. Our model is novel in the way it treats the borrowing caps as soft constraints, which makes it easy to analyze multiple non-redundant borrowing constraints. We also show an estimation strategy that involves a variation of impulse-response matching and accounts for the lack of historical data concerning the conduct of macroprudential policy, a common problem.

Funding for lending schemes should prioritize SME lending

MNB Occasional Papers 2020/138

Abstract: In the aftermath of the sovereign debt crisis, the Central Bank of Hungary implemented a great-scale fund-ing-for-lending scheme designed specifically to subsidize Small and Medium Enterprises' (SMEs) access to external finance. I identify this policy in the SVAR framework as asymmetric credit supply shocks specific to SME lending. During the post-crisis recovery, such shocks

had a substantial, positive effect on lending conditions and the real economy. For a unit of lending, these shocks had a larger and more persistent effect on output than general credit supply shocks. Moreover, rather than supplanting lending to large enterprises, the program had considerable positive spillover effects on this sector as well. These results are robust to different proxies of economic performance and alternative identification strategies. I conclude that under tight lending conditions funding for lending schemes are more effective if concentrated to SMEs.

Teaching experience

July 2019 – Dec. 2019	Budapest University of Technology and Economics Introduction to Multidimensional Time Series Analysis	Budapest, Hungary
• Introduction to VARs: Bayesian VARs and Structural VARs		
Jan. 2019 – June 2019	Eötvös Loránd University, Eltecon Introduction to Macroeconomics	Budapest, Hungary
• Introduction to theories of business cycles IS-LM and the model of aggregate supply and demand • Introduction to theories of long-run growth, the Solow model and the endogenous growth model		

Work Experience

June 2017 – October 2020	Central Bank of Hungary (MNB) Applied Research Department Analyst	Budapest, Hungary
---------------------------------	---	-------------------

Research projects:

- DSGE framework of macroprudential regulation
- Macro effects of Funding for Lending Schemes – via Bayesian SVARs
- Effects of bank capital requirements on lending activity – via panel methods

October 2016 – June 2017	Hungarian Central Bank (MNB) Macroprudential Policy Department Junior Analyst	Budapest, Hungary
---------------------------------	---	-------------------

Research projects:

- Bank efficiency measurement across Central and Eastern Europe – via Stochastic Frontier Analysis

Operational tasks:

- Assisted the development of the yearly Macroprudential and Financial Stability report
- Assisted the fine-tuning of Loan-to-Value (LTV) and Debt-to-Income (DTI) regulation

Scholarships

DAAD – GSSP doctoral scholarship, full funding for the duration of the Ph.D.
Partial tuition waiver for Barcelona Graduate School of Economics (2015-2016)

Other Skills

Computer Skills	R, Matlab, Julia, Stata, Latex
Languages	English (fluent), Hungarian (native)

Conferences and Workshops

Advances in SVAR and DSGE models, BP school for central bankers, 2019/3

Bayesian Time Series Methods: Introductory, Advanced, BGSE, 2019/2

Economic modelling and forecasting, Bank of England, 2018/4

Financial Sector Surveillance, Joint Vienna Institute, 2018/1
